

The Truth About Cancer

Article Description: Cancer- You have read about it - You hear about it -You see it on TV --- But there is one thing you are never told --- the TRUTH...It is growing by leaps and bounds. In 1960 1 out of 4 people had cancer. Today it is 1 out of 3. Soon it will be 1 out of 2.

Date of Publication: 1/8/2003

The Truth About Cancer

The CDC just reported that only ½ to 1% of metastatic cancer patients live longer than 5 years. Another published article in Current Cancer Research stated that chemotherapy is now credited with remissions in only 7% of cancer cases. We can drastically increase these numbers. Global Healing Center has developed an individual or complementary approach, which is now available to you.

For many years, the focus on cancer treatment has centered on destroying the cancer cells. While reducing tumor burden can be of benefit, chemotherapy, radiation therapy, and surgery do not, in most instances, cure cancer. In order to cure cancer one must change the underlying causes of the disease.

Nutrition supplements and diet therapy help to change the underlying causes of cancer, and thus help the patient's "host defense mechanisms" better fight off the cancer cells. Comprehensive cancer treatment should always include an aggressive nutritional component as part of the overall therapy.

THE TRUTH ABOUT CANCER

Cancer- You have read about it - You hear about it -You see it on TV --- But there is one thing you are never told --- the TRUTH.

You are never told the truth about the incidence of cancer. It is growing by leaps and bounds. In 1960 1 out of 4 people had cancer. Today it is 1 out of 3. Soon it will be 1 out of 2. In just the last 30 years the incidence of cancer has gone up a shocking 40%. This year, well over 1,250,000 Americans will get cancer. And all of this while Americans are spending mega billions of dollars on cancer treatment and research.

You are never told the truth about cancer death. Death from cancer is on a rapid rise. It has now overtaken heart disease as America's # 1 killer. This year, over 650,000 Americans will die with cancer in spite of the best therapy that conventional medicine has to offer.

You are never told the truth about what causes cancer. usually it is caused by toxic chemicals, not only by tobacco, but primarily industrial chemicals, pollutants, & radioactive substances in our food, water, air, homes, & workplace. Recently, the FDA found significant traces of 60-80 pesticides in the average American food shopping basket. Incredibly, the government did nothing.

You are never told the truth about cancer prevention. We can lower our risk of cancer by eliminating carcinogens from our food, water, air, homes, and workplace. There is valid scientific evidence that we can now significantly lower the risk of cancer by purging the body of all toxins then go on a healthy diet and exercise regularly.

You are never told the truth about conventional cancer therapy. For decades, the cancer establishment has foolishly relied on the crude and primitive treatments of surgery, radiation, and chemotherapy as their only weapons. These therapies are generally very dangerous, toxic, and inefficient, but highly profitable for the conventional medical field. Many knowledgeable doctors say that radiation & chemotherapy is murder.

They never tell you that Europe, China, and other countries are far ahead of the U.S. in the prevention and cure of cancer. Those therapies that are successful in other countries are not allowed in the U.S. So much for physicians trying to heal you and the FDA protecting you.

You are never told that radiation & chemotherapy is a brew of deadly poisons. Like surgery & radiation, the goal of chemotherapy is to purge the body of cancer by destroying cancer cells. Because the cancer cells divide more rapidly than normal cells, chemotherapeutic agents target rapidly dividing cells.

You are never told other cells, such as those in the hair follicles, intestinal lining, & bone marrow, are also seriously affected. It destroys the hair follicles and fast-growing epithelial cells lining the digestive tract. This is why chemotherapy usually results in hair loss & gastrointestinal illness. **The truth is, we are not winning the war against cancer.**

Over the last 38 years chemotherapy has been unsuccessful in most cases to treat Cancer. Chemotherapy is still not approved by the FDA and continues to be in field trials. There is only one way to successfully treat Cancer and degenerative diseases and that is through the use of a whole body approach. You cannot drug a body into health. You must nourish the body, mind and soul. Cancer is a systemic disorder, which means it is in the whole body. It simply manifests itself in a particular organ or site. This is typically one's genetically weak link. This is why you cannot cut an organ out. 96% of all cancer survivors of chemotherapy have a relapse after 5 years. Cancer is an anaerobic organism (without oxygen), which thrives in acidic, low oxygen, dark, moist environment. Cancer feeds on glucose and secretes lactic acid as a by-product. The liver then converts this lactic acid back into glucose, so you end up with a viscous cycle of the cancer feeding itself. **In order to stop Cancer growth you must change the body to an alkaline state, provide high levels of oxygen to the tissues and cut off the supply of glucose to the tumor-these are just a few of many techniques.**

Global Healing Center's unique approach of addressing the body as an integrated system makes sure that the nervous system, circulatory system, digestive system, lymphatic system, immune system, endocrine system and elimination systems are all functioning together. Once you have healthy cells, tissues, organs, and systems, you have a healthy body that is free of disease. Yes, there is hope --- the natural way.
